                                                                                                                                                                                                                                                                                                                             source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous. The length in codons is given for each CDS.

The length in codons is given for each CDS.

Usually the highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon.

Gene prediction is based on positional base preference in codons using a specially developed Hidden Markov Model (Krogh et al., Nucleic Acids Research, 22(22):4768-4778(1994) and the FramePlot program of Bibb et al., Gene 30:157-66(1984) as implemented at http://www.nih.go.jp/
jun/cgj-bin/frameplot.pl. CAUTION: We may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, gtg, ttg or (att)) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream initiation codon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Bacteria; Firmicutes; Actinobacteria; Actinobacteridae; Actinomycetales; Streptomycineae; Streptomycetaceae; Streptomyces.

Usually the highest scoring match found by fasta o is given for CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon. General sequences are given to be a sequence of the codon o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       correct initiation codon. Where possible we choose an initiation codon (atg, gtg, ttg or (att)) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                prediction is based on positional base preference in codons using specially developed Hidden Markov Model (Krogh et al., Nucleic Acids Research, 22(22):4768-4778(1994)) and the FramePlot program
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                IMPORTANT: This sequence MAY NOT be the entire insert of the sequenced clone. It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for a small overlap between neighbouring submissions. Cosmid IC2 lies between 8D9 and 7Al on the AseI-B genomic restriction fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             jun/cgi-bin/frameplot.pl. ```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes the full length genome of CC Neisseria meningitidis B (NMB). The sequences in AAF21544 and AAF21607 CC Neisseria meningitidis B (NMB). The sequences in AAF21544 and AAF21607 CC to AAF21613 represent fragments of the NMB genomic sequence, as the CC sequence was too long to go in a record on its own it was split into 8 CC sequences which overlap each other at the beginning and end of each CC sequence by 4990 bp (i.e. the last 49980 bp of AAF21544 is repeated at CC the beginning of AAF21608, and so on). AAF21545 to AAF21588 encode the CC Neisseria proteins given in AAB58550 to AAF21593, and AAF21599 to CC AAF21606 represent PCR primers which are used in the exemplification of CC the present invention. The NMB genome and fragments from it have CC Neisseria activity, and can be used in vaccines and gene therapy. CC Neisserial activity, and can be used in vaccines and gene therapy. CC Neisserial bacteria or as a diagnostic reagent for detecting the presence of Neisserial bacteria or as a diagnostic reagent for detecting the constraint of Computers. Computers activities are computers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

Computers, computer memory, computer storage medium or computer databases can be used in a search to identify open reading frames (ORFs) or coding sequences within the NMB genome. The DNA sequences provide further opportunities to find antigenic or immunogenic proteins which are more effective in vaccines than the outer membrane proteins currently

                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                ğ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC Neisseria meningitidis B (NMB). The sequences in AAF21544 and AAF21607 CC to AAF21613 represent fragments of the NMB genomic sequence, as the csequence was too long to go in a record on its own it was split into 8 CC sequences which overlap each other at the beginning and end of each CC sequence by 49980 bp (i.e. the last 49980 bp of AAF21544 is repeated at CC the beginning of AAF21608, and so on). AAF21545 to AAF21588 encode the CC Neisseria proteins given in AAB58550 to AAB58593, and AAF21589 to CC AAF21606 represent PCR primers which are used in the exemplification of CC AAF21606 represent invention. The NMB genome and fragments from it have CC entibacterial activity, and can be used in vaccines and gene therapy. CC Meisseria nucleic acids, proteins and/or antibodies which binds to the presence of Neisserial bacteria or as a diagnostic reagent for detecting the presence of Neisserial bacteria or of antibodies raised to Neisserial computer memory, computer Storage medium or computer CC databases can be used in a search to identify open reading frames (ORFs) or coding sequences within the NMB genome. The DNA sequences provide further opportunities to find antigenic or immunogenic proteins which are morely no effective in vaccines than the outer membrane morely no currently are

The present invention describes methods of obtaining immunogenic CC proteins from Neisseria genomic sequences. AAA81451 to AAA82414 CC represent specifically claimed Neisseria meningitidis genomic DNA CC sequences; AAA81260 to AAA81303 and AAB25620 to AAB2563 represent CC Neisseria DNA sequences and their corresponding proteins; AAA81254 to AAA81259 and AAA81304 to AAA8131 represent PCR primers used in the CC isolation of Neisseria meningitidis DNA sequences; and AAA81322 to AAA81452 represent Neisseria meningitidis MenB polynucleotide ORF CC Sequences, which are all used in the exemplification of the present CC invention. The nucleic acid sequences, protein sequences, and antibodies composition can be used in the manufacture of a composition. The composition can be used as a medicament (or in the manufacture of a CC Meisserial bacteria. For example, some of the identified proteins could be components of vaccines against Meningococcus B; against all serotypes; and/or against all pathogenic Neissariae. Identification of sequences and/or against all pathogenic Neissariae. Identification of sequences (Meningococcus B vaccines have failed mainly due to antigen tolerance. Multivalent vaccines have also been tried but none have successfully covercome antigenic variability. The provision of further, complete exposed proteins that may be presumed targets for the immune system and other more variabile readons.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 3

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1205593 AACAAGTCTGAATTGATCGAAGCGATTGCTCAAGAAGCCGACATTTCCAAAGCCGCCGCA 1205534
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1205533 CAAAAAGCTTTGGATGCCACTACCAATGCAGTAACCACCGCCCTGAAACAAGGCGACACC 1205474
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1205473 GTTACTTTGGTCGGTTTCGGTACTTTCTACGTGGGCGAACGTGCGGAACGCCAAGGCCGC 1205414
                                                                                                                  The present invention describes methods of obtaining immunogenic proteins from Nelsseria genomic sequences. AAA81453 to AAA82414 represent specifically claimed Nelsseria meningitidis genomic DNA sequences; AAA81206 to AAA81303 and AAB256620 to AAB25663 represent Nelsseria DNA sequences and their corresponding proteins; AAA81254 AAA81259 and AAA81321 represent PCR primers used in the isolation of Nelsseria meningitidis DNA sequences; and AAA81322 to AAA81323 represent PCR primers used in the isolation of Nelsseria meningitidis brown and AAA81322 to AAA81323 represent PCR primers used in the isolation of Nelsseria meningitidis brown and AAA81322 to AAA81323 represent PCR primers used in the isolation of Nelsseria meningitidis brown and AAA81322 to AAA81323 represent PCR primers used in the isolation of Nelsseria meningitidis brown and AAA81322 to AAA81323 represent PCR primers used in the isolation of Nelsseria meningitidis brown and AAA81322 to AAA81323 represent PCR primers used in the isolation of Nelsseria meningitidis proteins and AAA81323 represent PCR primers used in the isolation of Nelsseria meningitidis proteins and AAA81323 represent PCR primers used in the isolation of Nelsseria meningitidis proteins and AAA81323 represent PCR primers used in the isolation of Nelsseria meningitidis proteins and AAA81323 represent PCR primers used in the isolation of Nelsseria meningitidis proteins and AAA81323 represent PCR primers used in the isolation of Nelsseria meningitidis proteins and AAA81323 represent PCR primers used in the isolation proteins and AAA81323 represent PCR primers used in the isolation proteins and AAA81323 represent PCR primers used in the isolation proteins and AAA81323 represent PCR primers used in the isolation proteins and AAA81323 represent PCR primers used in the isolation proteins and AAA81323 represent PCR primers used in the isolation proteins and AAA81323 represent PCR primers used in the isolation proteins and AAA81323 represent PCR primers used in the isolation proteins and AAA81323
              AAA81452 represent Neisseria meningitidis MenB polynucleotide ORF sequences, which are all used in the exemplification of the present invention. The nucleic acid sequences, protein sequences, and antibodies against them, can be used in the manufacture of a composition. The
                                                                                                                                                                                                                                                                                                                                                    Claim 7; Page 1372-1375; 1760pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                     Isolated nucleotide sequences of Neisseria meningitidis which can be used in the diagnosis and treatment of N. meningitidis infection and other Neisserial infections, for example, N.gonorrhoea -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Frazer CM, Hickey

Identification of sequences from the bacterium will also facilitate production of biological probes, particularly organism-specific probes. Attempts to make efficacious Meningococcus B vaccines have failed mainly due to antigen tolerance. Multivalent vaccines have also been tried but none have successfully overcome antigenic variability. The provision of further, complete sequences may provide an opportunity to identify secreted or surface exposed proteins that may be presumed targets for the immune system and which are not antigenically variable or at least more conserved than
Genomic library for identifying diagnostic and therapeutic compositions, and for identifying virulence factors, regula

The gum gene cluster of Xanthomonas campestris can be inserted into a Sphingomonas species of bacterium. The gum gene cluster is inserted into the Sphingomonas $88 sps gene cluster which itself expresses an exopolysaccharide, sphingan $88. The new novel recombinant Sphingomonas strain can then produce xanthan gum from sugar substrates i.e. the cheese-making by-product whey lactose, sucrose or starch. These are substrates which the Xanthomonas campestris bacterium cannot utilise in its product the cheese can be compared to the c
                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence of segment of Xanthomonas campestris DNA that contains gene cluster that directs Xanthan biosynthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 16075 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              production of Xantham gum. Use of the Sphingomonas species also minimises the presence of contaminating cellulases in the growth medium into which the xantham gum is secreted.
